

Energy-efficient thermostat options that can help you save

As part of your home energy assessment, ComEd and Nicor Gas offer four energy-efficient thermostat options to upgrade your existing thermostat. Your energy advisor can help you choose the one that's best for your home.

Programmable thermostat

Programmable thermostats help you control the heating and cooling temperatures in your home. Program this thermostat to adjust your home's temperature to best fit your schedule and lifestyle. You can program weekdays separately from weekends to increase your comfort and optimize savings each day of the week.

Smart thermostat

Smart thermostats are also programmable thermostats, with additional features and advanced functions to offer more benefits. A smart thermostat allows you to monitor and control the temperature in your home remotely from your smart phone or other web-enabled device. Plus, smart thermostats can save energy and maximize comfort by automatically adjusting the temperature of your home to meet your preferences and activities.

Since the temperature of your home can be controlled by a smart phone or other web-enabled devices, a smart thermostat is an efficient way to save money and energy without sacrificing comfort.

[Learn more about the differences between these thermostats on the next page.](#)
